

(H) Operators will not be exposed to hazardous chemicals or conditions during normal operation and maintenance of MSD's.

(ii) Because of the above standard, MSD's under development or procurement for new vessels or to replace existing equipment should be selected with "no discharge" as a possible parameter and that full consideration be given to systems based on holding tanks rather than actual treatment systems. DARCOM will ensure that appropriate Environmental Protection Control Reports (RCS DD-I&L(SA) 1383) on MSD retrofit costs are forwarded through channels to HQDA (DAEN-FEU) WASH, DC 20314 in accordance with chapter 10, this regulation.

(iii) MSD's will be so designed to preclude contamination of potable water supplies.

#### **§ 650.60 Ocean dumping standards.**

The Marine Protection, Research and Sanctuaries Act of 1972 (Pub. L. 92-532) and EPA prohibit the dumping of certain materials into ocean waters and controls the dumping of all other materials. Army controlled activities will comply with the regulations and standards set by this act and notify HQDA (DAEN-ZCE) WASH DC 20310 of all permit requests. (40 CFR parts 220 through 227 and 33 CFR 323.324).

#### **§ 650.61 Activities in navigable waters.**

The construction of any structure in or over any navigable water of the United States, the excavation from or depositing of material in such waters, or the accomplishment of any other work affecting the course, location, condition or capacity of such waters must have prior approval of the Chief of Engineers or his authorized representative. Authority for such work is provided by issuance of a permit. Policy, practice and procedures are contained in 33 CFR part 322.

#### **§ 650.62 Storage of hazardous materials.**

Storage facilities for materials which are hazardous to health, and for oils, gases, fuels or other materials capable of causing water pollution, to either surface or ground waters, if acciden-

tally discharged, will be so located as to minimize or prevent such spillage. Measures necessary to entrap spillage, such as catchment areas, relief vessels, of entrapment dikes, will be installed so as to prevent and/or contain accidental pollution of water (subparts F and I of this part).

#### **§ 650.63 Water supply treatment procedures.**

Water supplies will be monitored and, where necessary, treated in accordance with AR 420-46, Water and Sewerage, TB MED 229; AR 115-21, Hydrologic Services for Military Purposes and AR 115-20, Field Water Supply.

#### **§ 650.64 Water conservation.**

(a) *Reduce consumption.* All uses of water will be periodically surveyed and action taken to reduce water consumption wherever possible. The design and construction of new facilities and processes will consider minimized consumption of water, in particular potable water, as a major parameter. Vegetation and landscaping will be selected for the particular climate and geographical location so as to minimize or eliminate the need for irrigation.

(b) *Reuse-recycle.* In addition to reducing initial water consumption, water conservation measures will include the reuse or recycling of wastewater whenever practicable. The design methodology for new or for modification of old facilities and processes will identify potential re-use or recycling of wastewater alternatives and such alternatives will be selected whenever it is determined economically competitive with "once through" processes. Examples include closed cycle cooling systems for power plants and the use of land based sewage treatment systems.

(c) *Erosion Control.* Operations will be scheduled and designed to reduce or eliminate the destruction of vegetation and other ground cover which prevents erosion and stream siltation. Siting of new facilities will consider topography and soil conditions to reduce construction in areas sensitive to erosion. Construction techniques and methods that minimize erosion will be identified in all construction contracts and design/construction specifications. Large

parking lots, roof areas, aircraft facilities, and roads which result in rapid runoff will be minimized wherever practicable. Periodic surveys will be made to identify areas where erosion has occurred and action will be initiated to control further erosion such as planting vegetation; controlling and, where necessary, impounding stormwater from areas of rapid runoff.

**§ 650.65 Minor industrial and municipal operations.**

Wastewater discharge from minor industrial and municipal facilities such as wash racks, engine steam cleaning operations, water treatment plant backwash, swimming pool filter backwash, and other similar activities will be connected to the sanitary sewer wherever feasible. It should be noted that effluent from these activities not connected to sanitary sewers requires an NPDES discharge permit. To eliminate costly and difficult treatment and monitoring programs all possible efforts should be directed to connecting with the sanitary lines. At remote locations, a holding tank may be used which is sized to hold all drainage between pumpouts. After pumpout, the wastewater will be transported to another location for treatment and disposal. Other alternatives include onsite treatment which would require a discharge permit, or a closed cycle system which would treat and re-use the wastewater. In the latter case, if there were no discharges, a permit would not be required.

**§ 650.66 NPDES permits.**

The NPDES permit program (40 CFR part 125) requires that all discharges of pollutants from point sources into navigable waters, (§ 650.53(a)(6)), will be regulated by a discharge permit. This applies to domestic and industrial wastewater. The permit requirement does not extend to discharges from separate storm sewers except where the storm sewers receive industrial, municipal and agricultural wastes or runoff or where the storm runoff discharge has been identified by the Regional Administrator, the State water pollution control agency, or an interstate agency as a significant contributor of pollution. Also exempted are Army con-

trolled properties (except when needed for public use) which are leased to contractors or others under authority of 10 U.S.C. 2657. It is the administrator of the lease who will monitor and institute corrective actions as necessary to insure that the leasee obtains and adheres to the NPDES permit.

(a) *Permit application.* When it is determined that an NPDES permit is required, permit applications will be requested from the applicable EPA Regional Office.

(b) *Draft permits.* A draft permit will be issued based on the permit application. The draft permit will contain effluent limitations necessary to meet water quality standards; compliance schedules identifying dates on when the effluent limitations will be met, monitoring programs identifying type of pollutant to be monitored, method of sampling and analysis, frequency of sampling; and method and frequency of reporting monitoring program results.

(c) *Draft permit review.* EPA is required to provide copies of the draft permit to the installation commander, the state, and the general public for review and comment. In general there will be not less than thirty (30) days in which to provide comment before the final permit is issued. MACOM's will provide copies of all NPDES permits (both draft and final) received from EPA to the U.S. Army Environmental Hygiene Agency, ATTN: HSE-EW, Aberdeen Proving Ground, MD 21010. USAEHA will accomplish: A technical review of each NPDES permit received, provide advice or assistance to the installation commander, through appropriate command channels establish liaison with the EPA, as necessary, to clarify and discuss permit conditions and provide written comment back to the permittee for subsequent passage of written comments to the appropriate EPA Regional Office. Installation commanders will report potential problems arising from the terms of the permits which could impact on the operational capability of the installation to the HQDA (DAEN-FEU) Washington, DC 20314 through appropriate command channels. In addition, the permits will contain instructions pertaining to reporting changes in quality or quantity of wastewater.
